

CUPA 12

Description, Origin & Production

- **CUPA 12** is a grey slate with a smooth matt surface. This slate is noted for its exceptional consistency of thickness and surface appearance. Qualities that have made it a popular choice for large commercial projects. Split to an average thickness of 4 and 6 mm.
- La Campa Quarry. Folgoso del Caurel (Lugo), Spain. In operation since 1972.
- 15,000 Tons/year.

WATER ABSORPTION	0.27%
CONTENTS OF CARBONATE NON CARBONATED	-
MoR CHARACTERISTIC	54
CARBONATES CONTENT	0.60%
THICKNESS	5 mm & 6 mm

Grading

All natural slate should be graded into at least 3 thicknesses prior to being placed on the roof. To minimize the effect of any variation in shade, slate should be drawn from at least 2 pallets at time.

As with any natural product, slate is subject to variance, and any slates that are identified at the time of grading as problematic should be cut and used at the eaves or ridge of the roof.

For further information on fixing natural slate please contact your supplier or visit www.cupanaturalslate.co.uk
