CONTENTS OF CARBONATE NON CARBONATED	0.44%
M <sub>0</sub> R CHARACTERISTIC	64
CARBONATES CONTENT	0.60%
THICKNESS	3.5mm to 5mm & 7-8mm

### Grading

All natural slate should be graded into at least 3 thicknesses prior to being placed on the roof. To minimize the effect of any variation in shade, slate should be drawn from at least 2 pallets at time.

As with any natural product, slate is subject to variance, and any slates that are identified at the time of grading as problematic should be cut and used at the eaves or ridge of the roof.

For further information on fixing natural slate please contact your supplier or visit [www.cupanaturalslate.co.uk](http://www.cupanaturalslate.co.uk)
